TECH STACK

Python | TypeScript | Go | FastAPI | Django | HTMX | Docker | AWS | SQL

EXPERIENCE

Technical Product Owner | Companhia Excelsior Seguro | Jan 2024 – Mar 2026

- **Eliminated** production crashes during peak billing periods by conducting root-cause analysis and collaborating with Tech Leads to implement message queue prioritization and Dead Letter Queue (DLQ) fallback strategies.
- **Enabled** future platform scalability by collaborating on the architecture for internationalization, multi-currency support and third-party API integrations.
- **Improved** engineering visibility by developing Python automation and data analysis scripts while defining technical requirements for new platform capabilities.
- **Bridged** business requirements and engineering implementation by translating product needs into technical specifications and coordinating cross-functional development efforts.

Project Assistant | Companhia Excelsior Seguros | May 2023 – Jan 2024

- **Reduced** weekly report generation time from one business day to 15 minutes by developing Python automation scripts.
- **Supported** strategic engineering decisions by analyzing operational data, identifying behavioral anomalies and delivering actionable stakeholder reports.
- **Improved** cross-functional alignment by gathering technical requirements and coordinating communication between engineering and business teams

Project & Process Intern | Companhia Excelsior de Seguros | May 2022 – May 2023

- **Reduced** legacy process execution time by over **90%** (8 hours to 30 minutes) by optimizing internal workflows and automating repetitive tasks.
- **Eliminated** repetitive manual reporting by developing Python automation scripts with Pandas for cross-functional teams.

EDUCATION

Postgraduate Program in Computer Software Engineering | PUC Minas - Jun 2025

- Developed a financial management system using **C#**, **ASP.NET MVC**, and **SQL Server**, implementing full **CRUD** operations and leveraging **Docker** for containerization to streamline backend integration.

Bachelor of Engineering in Mechatronics, Robotics, and Automation | Wyden - Dec 2022

- Developed and tuned a **PID-based** temperature control system, improving thermal stability and precision through automated **feedback loops**.
- Co-developed a hardware-software integrated digital thermometer, programming the **microcontrollers** in **C** to ensure accurate **real-time data sampling**.
- Designed a comprehensive electrical system simulation for a commercial building, ensuring strict compliance with **NBR regulatory standards**.
